Gym flooring manufacturer

www.meetefit.com

Meetefit is a name synonymous with durable & safe rubber flooring. We have been manufacturing safe flooring solutions to our in China and abroad for over a decade. The mark of the craftsmanship of our product is satisfactory smile on the face we receive at the end of each work undertaken by our experts and supported by satisfactory certificates.

Meetefit has been in existence for over last ten decades and continuously adapting new trends in fitness and lifestyle by embracing new technology and scientific breakthrough in manufacturing to satisfy the new needs of fast changing markets. Meetefit is promoting rubber flooring through its dedicated team of experts that can deliver safety flooring solutions with perfect installation. We ensure that every project we undertake is technically & economically satisfying for our clients along with a promise of quality and durability that we stand by.

Why Meetefit

FLOORING IS OUR BUSINESS

From commercial gym clubs to home gym to studio and beyond.
When gym flooring meets business, we've got you covered.

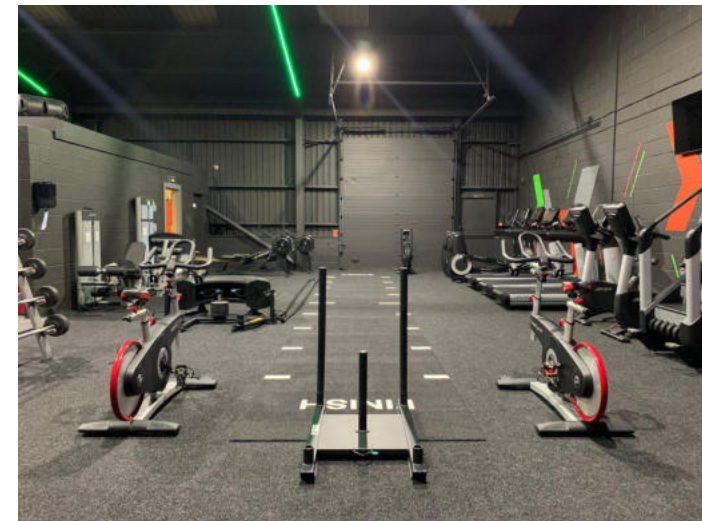

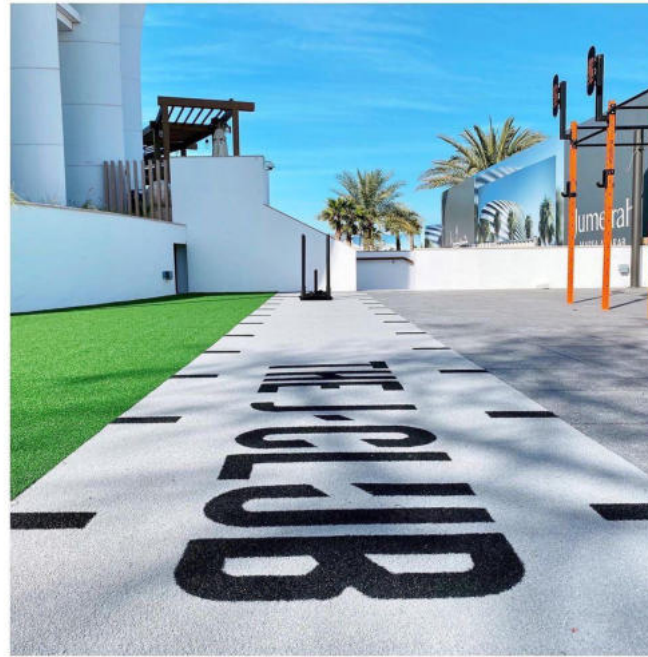

FLOORING

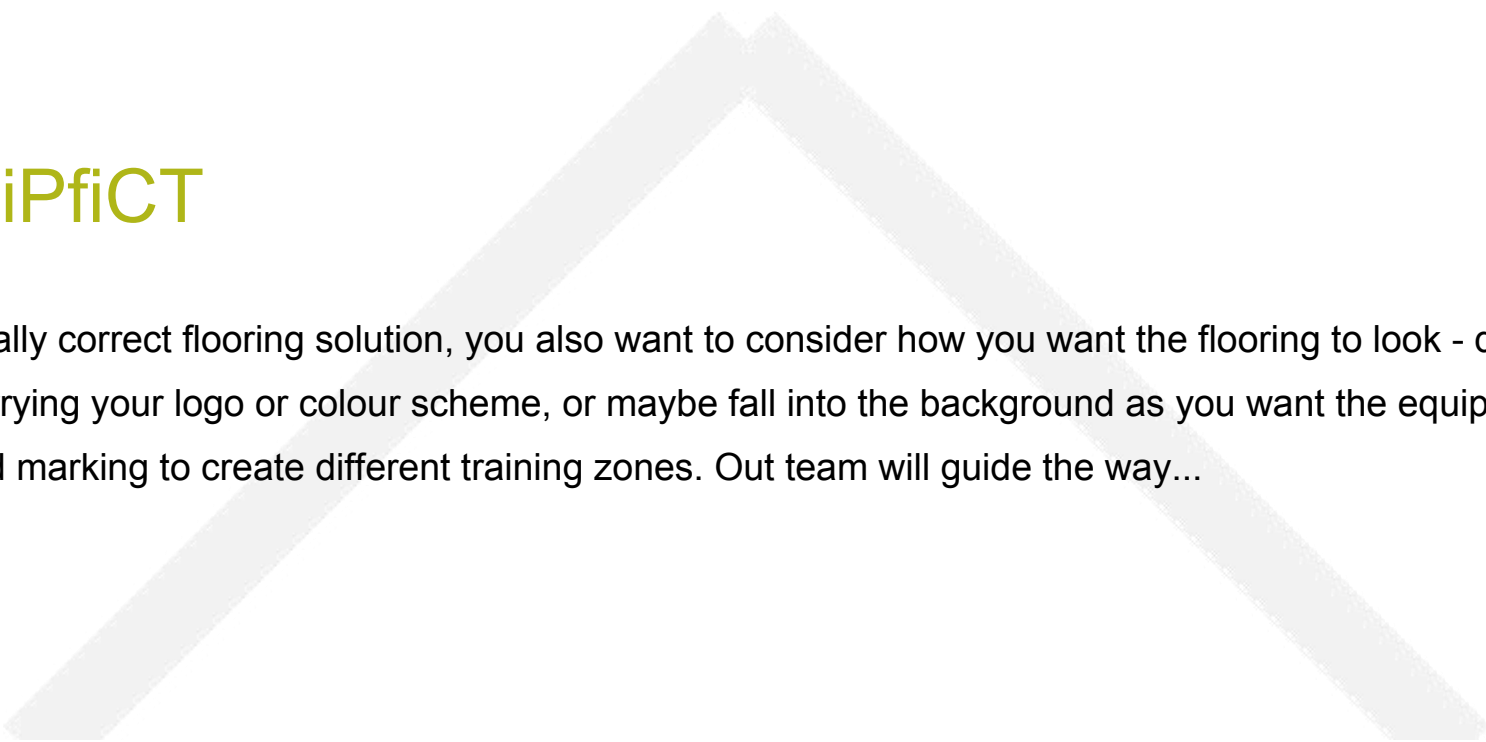

Flooring is the foundation of your facility; it literally underpins your gym, but it's an area that's often overlooked.

When designing a training space, we always approach it from the ground up, floor first. Getting your gym flooring right will set the tone for the rest of your space and allow you to build a safe and effective environment. And we really do believe it's the most critical element to get right first time.

Mistakes with flooring can be costly, complicated, and time-consuming to correct once your gym is open and operational.

To help you select the most appropriate flooring types and installation methods we offer professional site surveys and installation services.

VISUAL IMPACT

As well as a technically correct flooring solution, you also want to consider how you want the flooring to look - do you want it to stand out and make an impact, carrying your logo or colour scheme, or maybe fall into the background as you want the equipment to stand out more? You can also use colours and marking to create different training zones. Our team will guide the way...

TRAINING

It's unlikely you'll need the same flooring throughout your whole training space - the type of flooring dictates what the space can be used for, and a varied training space needs varied flooring surfaces. For example, strength training and free weight areas will need something to absorb impact and reduce noise and vibrations, while functional areas will need a non-slip surface with the ability to add floor graphics. Our expert team can take you through the options and help you select the most appropriate solutions.

SOUND REDUCTION

With mixed-use buildings now the norm the reduction of audible structure-borne sounds is vitally important and, understanding the design and science of sound is an essential component to any gym design. The most important consideration is how sound, and energy will travel within your gym. Our experienced flooring consultants can conduct on-site tests and advise on the correct solution to achieve the correct acoustic results.

Flooring Usage Guide

This usage flooring guide compares all the products in the brochure against their usability.

Vertically we have positioned the products against the usability horizontally. This provides a great overview of where each product is best suited. Please note that this is our recommendation. The products in the higher end of our range will cater for most of the usability stated below, but it may not be the best product for that scenario. For more advice talk to one of our flooring experts.

OUR PROJECTS

Rubber Platform

The Power Platform has been developed with the heavy use and performance requirements of modern gyms where heavy lifting is taking place.

This power platform slots seamlessly into both Power Rack, Performance Power Case as well as Multi functional Half Rack.

The platform is constructed from an exceptionally durable solid Asian hardwood insert surrounded by 40mm sound and shock absorbing SBR rubber tiles all encased in a steel surround to help reduce impact.

Rubber Platform
